Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         A) Note: sequence extracted from NCBI backbone (NCBIP:119917)
C; Comment: The alpha chain binds by 2-4 cross-links to the amino end of fibronectin.
C; Comment: The conversion of fibrinogen to fibrin is triggered by thrombin, which cleave ization sites responsible for the formation of the soft clot.
C; Comment: The soft clot is converted into the hard clot by factor XIIIa (fibrin-stabili ger) and between alpha chains (weaker) of different monomers.
C; Comment: All fibrinogen chains are synthesized in the liver.
C; Comment: See PIR:FGHUA for the major splice form. It is not known whether this form is
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         F:288,419/Binding site: carbohydrate (Asn) (covalent) #status absent

Natl. Acad. Sci. U.S.A. 96:1904-1909(1999).
-!- FUNCTION: BINDS TO TYROSINE-PROTEIN KINASE RECEPTOR TIE2 AND MAY ACT AS AN ANTAGONIST.
-!- TISSUE SPECIFICITY: WIDELY EXPRESSED.
-!- SIMILARITY: CONTAINS 1 FIBRINOGEN C-TERMINAL DOMAIN.
-!- CAUTION: WAS ORIGINALLY (REF.1) CALLED ANGIOPOLETIN-3.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Valenzuela D.M., Griffiths J.A., Rojas J., Aldrich T.H., Jones P.F., Zhou H., McClain J., Copeland N.G., Gilbert D.J., Jenkins N.A., Huang T., Papadopoulos N., Maisonpierre P.C., Davis S.,
